

CLT Pavilion EXPO Milano 2015

Milano, Italy

“Feeding the Planet, Energy for Life” – that’s the theme of this year’s World Expo in Milan. Particularly eye-catching is the Slovenian pavilion with its theme “I feel SLOVEnia, Green.Active.Healthy,” which has been constructed primarily from wood and glass. The architects have combined a wood frame construction with load-bearing CLT elements produced by Stora Enso. It is no coincidence that CLT (Cross Laminated Timber) was chosen: The building material is considered a true all-rounder in the timber industry. And with its wooden pavilion Slovenia is consciously positioning itself as a country with a rich “wooden heritage.”
