

Hurst Avenue

London, United Kingdom

EURBAN

A contemporary new luxury five bedroom home in the north London suburb of Highgate. The house is built on a sloping site and the architects have devised a split level layout around a light well at the centre. The rear of the house is 0.5 level up from the front and the layout zig-zags up from the front which results in a wonderful flow through the building and gives a feeling of space whilst still being connected.

Building with CLT by Stora Enso means that it is possible to span large areas without the need for joins or other additions and this made it the perfect solution to deliver the Bliss Space concept of open and natural living.
