Kaerntner Sparkassen

St. Andrä im Lavanttal, Austria

Employees at Kärntner Sparkasse in St. Andrä im Lavanttal did get a particularly sustainable workplace, just in time for World Savings Day on 30th October. It is characterized by natural materials, intelligent construction methods and minimum energy requirements. Around 150 m³ of certified CLT from Stora Enso have been used in the building. The timber construction will give this bank branch a particularly pleasant atmosphere, for employees as well as customers. The new branch is the second timber construction project this year, implemented by Kärntner Sparkasse as part of their "Branch concept 2020". Last year alone, four timber branches were opened.
