

Office building and warehouse EKO Produkt Komenda, Slovenia

The largest timber structure in Slovenia stands in the middle of a commercial area where strict design regulations are imposed. The square 34 x 34 m ground floor has an 8 x 8 m cut-out in the western corner, which features a large overhang. The 8.5 m high structure was constructed during the first phase and will be extended with two additional stories of commercial spaces, with the total height of 14 m. Structural engineering for that building was made by the company CBD.

Office Building Concept by Stora Enso

The office buildings of the future are made of wood.
