

# Single Family House Poehhacker Steinakirchen, Austria

The theme for this single family house is "ecology". Stora Enso CLT was used as building material for the house and the carport. The special feature of this design was not only the speed in building this house but also the usage of CLT in visible quality (VI). Additionally, the stairs were made of door and window cutouts. The facade consists of a hemp insulation and the interior walls were partially plastered with clay.
