

Wood City Office

Helsinki, Finland

The new office building is based on Stora Enso's building components such as posts, beams and ribbed panels for floors and roofs. The components are made of LVL by Stora Enso from the company's Varkaus mill in Finland, as is the case regarding the two multi-storey residential buildings for Helsinki housing production in Wood City.

Office Building Concept by Stora Enso

The office buildings of the future are made of wood.
