Stora Enso Gruvön Mill

Grums, Sweden

Partner of Stora
Enso

Gruvön Sawmill in western Sweden produces sawn timber, processed timber, pellets and made to order products primarily for construction.

The raw material for the sawmill includes pine and spruce logs locally sourced from Stora Enso's significant local land holdings.

The mill has an annual capacity of:

370 000 m³ (sawn timber)

150 000 m³ (processed timber),

80 000 m³ (CLT)

and 100 000 tonnes (pellets)

Founded in 1890. To keep up with the growing demand for mass timber, in 2019 Stora Enso invested EUR 45 million in a new production unit for cross laminated timber (CLT). The production capacity of the new unit at Gruvön sawmill will increase the annual capacity to 100 000 m³ annually.
