Ralph Allen School

Bath, United Kingdom

EURBAN

The new wooden Lee Building in Bath (United Kingdom) has been designed to be educationally innovative with open, flexible breakout spaces ranging from 10 to 70 m² around a double height hub space leading out onto the surrounding landscape. The Science, Technology & Mathematics (STEM) focused building has been named among the "50 Best Buildings" in Britain in 2014 and has won a South West Regional and National RIBA 2014 Award. CLT's potential for enhancing the internal environment was an important factor in the design and approximately 80% of the material has been left exposed internally. A total of 185 m³ CLT by Stora Enso was used for this project.

School Concept by Stora Enso

Let's build a learning environment for the next generation.
