Single Family House Zamberk

Žamberk, Czech Republic

In this project in Žamberk (Czech Republic), space has been used to an optimum despite tight layout specifications. Throughout the entire building, great care has been taken to expose as many visible CLT wood surfaces as possible to create a natural sense of space. The almost exclusive use of wood and wooden materials, the exposure of wood surfaces throughout the entire building, and the well-chosen orientation of the two building structures have been honoured with an award. A total of 127 m³ of visible quality CLT by Stora Enso was used to build this detached house.
